AUDIT

Usability

26 issues · 0 critical · 5 major · 21 minor · 0 suggestion

The page features a sophisticated, minimalist design with a strong sense of brand identity and excellent use of whitespace. While the visual hierarchy is generally clear, there are minor navigation redundancies in the header and some wayfinding tools, like the Table of Contents, are visually under-emphasized, potentially hindering navigation on this long-form page.

Imagery & icons 2

1. The "ring" distortion effect heavily warps the central images in the carousel, making the content difficult to recognize. This stylistic choice obscures the very "case studies" the user is invited to explore, prioritizing form over function.

Major

“Drag the ring — or scroll inside it.”

TRY

Reduce the intensity of the warping effect so that the active/central image remains legible and undistorted.

2. The navigation thumbnails for the media gallery are too small to provide meaningful visual previews of the content, making it difficult for users to distinguish between the different service examples without clicking through them.

Minor

“01 AUDIT”

TRY

Increase the size of the thumbnails to improve their legibility and effectiveness as a visual navigation tool.

Affordance 1

3. The voice note players (circular avatars) lack clear interactive signifiers. Without a visible play button or waveform overlay, users must rely on the body text instructions to understand that these images are interactive audio elements.

Major

“Hit play to hear”

TRY

Add a play icon overlay or a small waveform graphic to the avatars to clearly signal their function as audio players.

Captured on page · Major

Hierarchy 1

4. The Table of Contents is visually buried due to its extremely small scale and isolated positioning on the far left edge. On a page of this length, this key wayfinding tool lacks the prominence needed to be useful.

Major

“Table of Contents”

TRY

Increase the font size and visual weight of the Table of Contents to make it a more effective navigation aid.

Captured on page · Major

Navigation 2

5. The Table of Contents creates significant navigation redundancy by repeating 'WORK' and 'SERVICES' from the primary header, while also introducing new items ('VOICES', 'CONTACT') and omitting others ('About'). This inconsistency between two visible menus makes it unclear which is the authoritative source for site structure.

Major

“Table of Contents”

TRY

Consolidate all navigation items into a single, consistent header menu. If a side-nav is required for scroll-spy functionality, ensure it mirrors the primary navigation's labels and structure exactly.

Captured on page · Major

6. The central 'Home' icon is redundant as the brand logo on the left typically serves this function. Having two separate home-navigation points in the header adds unnecessary cognitive load.

Minor

“Home”

TRY

Remove the central Home icon and ensure the brand logo links to the homepage.

Consistency 5

7. The "Close focused project" button uses a down-arrow icon, which is a standard signifier for "scroll down" or "expand" rather than "close." This creates a functional mismatch as users typically look for an 'X' or a back arrow to exit a focused state.

Major

“Close focused project”

TRY

Replace the down-arrow icon with a standard 'X' icon to clearly signify the closing action.

8. No consistent type scale

Minor

26 distinct font sizes (aim 10 or fewer)

TRY

Define a fixed type scale (e.g. 12/14/16/20/24/32px) and map every text style onto it.

Found 26 distinct font sizes (a tidy interface usually stays under 10). Too many suggests no shared system and a less cohesive feel.

9. Too many text colours

Minor

38 distinct text colours (aim 12 or fewer)

TRY

Reduce text colours to a small token set — primary, secondary, muted, link, and state colours.

10. Inconsistent corner radii

Minor

13 distinct border radii (aim 6 or fewer)

TRY

Pick a small radius scale (e.g. 4/8/16px) and apply it consistently across components.

Found 13 distinct border radii (a tidy interface usually stays under 6). Too many suggests no shared system and a less cohesive feel.

11. The "Continue" button at the bottom right uses a nearly identical visual treatment (circular button with a down arrow) as the "Close" button above it. Using the same signifier for two different navigation outcomes (closing a view vs. advancing the page) is confusing.

Minor

"Continue — capabilities and clients"

TRY

Differentiate the "Continue" action visually, perhaps by using a text label alongside the icon or a different button style to distinguish it from the section-specific controls.

Typography 7

12. Long all-caps text

Minor

34 chars in all-caps

TRY

Use sentence case for long text and reserve all-caps for short labels or badges.

13. Long all-caps text

Minor

16 chars in all-caps

TRY

Use sentence case for long text and reserve all-caps for short labels or badges.

14. Body text is very small

Minor

Font size 11px (min ~12px)

TRY

Increase this text to at least 12px (16px for body copy) so it stays readable on small screens.

Text here is 11px. Body copy below ~12px is hard to read, especially on mobile.

Captured on page · low

15. Body text is very small

Minor

Font size 10px (min ~12px)

TRY

Increase this text to at least 12px (16px for body copy) so it stays readable on small screens.

Text here is 10px. Body copy below ~12px is hard to read, especially on mobile.

Captured on page · low

16. Body text is very small

Minor

Font size 12px (min ~12px)

TRY

Increase this text to at least 12px (16px for body copy) so it stays readable on small screens.

Text here is 12px. Body copy below ~12px is hard to read, especially on mobile.

Captured on page · low

17. Long all-caps text

Minor

16 chars in all-caps

TRY

Use sentence case for long text and reserve all-caps for short labels or badges.

Captured on page · low

18. Body text is very small

Minor

Font size 12px (min ~12px)

TRY

Increase this text to at least 12px (16px for body copy) so it stays readable on small screens.

Text here is 12px. Body copy below ~12px is hard to read, especially on mobile.

Captured on page · low

Grouping

4

19. The block of text in the upper right is visually isolated from the main hero heading and primary CTA. Its distance from the central focal point makes it feel like a stray element or an afterthought rather than a supporting part of the core value proposition.

Minor

"We don't do generic."

TRY

Move this text block closer to the main heading or integrate it into the central column to improve the narrative flow and ensure it is read.

20. The 'THE RESULTS' section label is visually detached from the content it introduces. Its extreme left-hand placement and high vertical offset create a weak association with the centered heading and body text, making it feel like an orphaned element.

Minor

"THE RESULTS"

TRY

Move the label closer to the main content block, perhaps aligning it with the left edge of the heading or placing it directly above the 'Unfiltered Feedback' pill.

Captured on page · Minor

21. The 'Read the eight levers' link is visually orphaned from its section heading ('Our Clients') due to excessive horizontal spacing, breaking the expected relationship between the label and the action.

Minor

| *"Read the eight levers"*

TRY

Move the link closer to the heading to reinforce their logical connection.

Captured on page · Minor

22. The "Close" button is visually disconnected from the carousel it controls, floating in the upper right gutter with excessive whitespace. This lack of proximity makes it difficult to associate the control with the active content area.

Minor

| *"Close focused project"*

TRY

Move the close button closer to the carousel container or anchor it to the top-right corner of the active 'card' area.

Captured on page · Minor

Spacing & alignment 3

23. The platform list at the bottom of the expanded accordion item is visually cramped against the horizontal divider, lacking sufficient vertical padding to maintain the clean aesthetic and hierarchy of the rest of the section.

Minor

| *"GA4 · TRIPLE WHALE · META ADS · NORTHBEAM"*

TRY

Increase the vertical padding below the platform list to provide better separation from the divider line.

Captured on page · Minor

24. The three informational columns describing the voice notes have inconsistent horizontal spacing and unbalanced widths. The middle column is significantly wider than its neighbors, which makes the vertical dividers appear misaligned and creates a ragged visual rhythm in an otherwise centered layout.

Minor

"Owners & growth leads"

TRY

Distribute the three columns into equal-width containers or center the text within each column to create a more stable and balanced grid.

Captured on page · Minor

25. The brand identity is fragmented across the header, with the wordmark on the far left and the logo mark isolated in the center. This unconventional split breaks the standard mental model of a unified logo/home anchor and creates a disjointed scanning pattern for the user.

Minor

"Home"

TRY

Group the logo mark and wordmark together in the top-left corner to create a single, recognizable brand anchor.

Captured on page · Minor

State & feedback 1

26. The 'Close focused project' button is visible without an obvious 'focused' or expanded state active in the carousel, making it appear as a stray or non-contextual UI element.

Minor

"Close focused project"

TRY

Ensure the close button only appears when a specific project view has been expanded or focused by the user.
